Fax: 00386 421 37 41,
E-mail: info@abraxas.si

The data from Abraxas Controlling can be reviewed in MS Excel.

The Abraxas Controlling module is integrated within Active X and can also be integrated into other programs and business applications. Using MS Word data can be prepared automatically for updates for credit committee's using data from an external database.

Abraxas Controlling enables data to be saved using a central database:

- about business objects (to find out your client's financial position),
- about your branch offices (when modules are used to monitor your own business),
- about booking, credit ratings (data about object's value items).

The solution includes the ability to analyse formulas, which is suitable for working with financial data:

it can be used for time rows forming, average calculating, quick items of aggregating of credit ratings...

Properties:

- The solution includes own formula analyzer, which is suitable for working with financial data: it can be used for time rows forming, average calculating, quick items of credit ratings aggregating ...
- Proven Solution. Our clients have been using this solution for ten years in banking and in other business companies.
- High employability. The solution can be used to give companies an advantage in controlling financial data.
- Open Solution. The solution can be used in MS Excel for mutual work (to enable the package to change data) and in MS Word for automatic updates of documents etc.
- High connectivity. Abraxas Controlling can be used with

most available databases.

- Speed of solution. Index calculating is achieved quickly. A pre-defined index can be set and data can be calculated over night.

- This solution communicates issues relating to MS Excel to ensure safety of data and the ability to analyse large quantities of data.
- Safe data access. Security levels can be defined ensuring that users only access data within the level that is relevant to them.
